ONYER

Rehabilitation Centre : Nyaru Menteng
Arrival Date : 15 February 2021
Age at Arrival : 10 months
Gender : Male

Onyer was rescued from Dahian Tambuk village, Gunung Mas Regency, Central Kalimantan, by the Central Kalimantan BKSDA's wildlife rescue team. He was subsequently handed over to the Nyaru Menteng Rehabilitation Centre on 15 February, 10 months old.

Upon arriving at Nyaru Menteng, Onyer immediately underwent an examination and was found to be in good health. After passing the quarantine period, Onyer has now joined fifteen other orangutans in a Nursery Group at Forest School.

On his first day at Nyaru Menteng, Onyer was very nervous. This is understandable, given that he was in a new environment with unfamiliar faces. Onyer was unsettled at night and cried whenever a surrogate mother stood up, perhaps out of distress that he might be left alone again.

Thankfully, Onyer has a fairly good appetite and likes to drink milk and eat fruit. On his first day, he battled a mild flu, but our dedicated medical team swiftly administered nebulizer treatments to aid his recovery. Despite this, Onyer wasted no time in exploring, already swinging and climbing with zest on the enrichment structures!

He quite enjoys looking in the camera lens - we have many pictures of him admiring his own reflection!

ONYER

Pusat Rehabilitasi : Nyaru Menteng
Kedatangan : 15 Februari 2021
Usia Kedatangan : 10 bulan
Jenis Kelamin : Jantan

Onyer diselamatkan dari Desa Dahian Tambuk, Kabupaten Gunung Mas, Kalimantan Tengah, oleh tim penyelamatan satwa liar BKSDA Kalimantan Tengah. Ia kemudian diserahkan ke Pusat Rehabilitasi Nyaru Menteng pada tanggal 15 Februari, berusia 10 bulan.

Setibanya di Nyaru Menteng, Onyer segera menjalani pemeriksaan dan dinyatakan dalam keadaan sehat. Setelah melewati masa karantina, onyer kini telah bergabung bersama lima belas orangutan lainnya di Sekolah Hutan Grup Kecil.

Pada hari pertamanya di Nyaru Menteng, Onyer sangat gugup. Ini bisa dimaklumi, mengingat ia berada di lingkungan baru dengan wajah-wajah yang tidak dikenal. Onyer gelisah di malam hari dan menangis setiap kali seorang ibu asuh berdiri, mungkin karena takut ditinggalkan sendirian lagi.

Untungnya, Onyer memiliki selera makan yang cukup baik dan suka minum susu serta makan buah. Di awal waktunya di Pusat Rehabilitasi Nyaru Menteng, ia mengalami flu ringan dan tim medis kami secara rutin memberikan perawatan nebulizer untuk membantu pemulihannya. Akhirnya Onyer membaik dan mulai bermain di ayunan dan memanjat di infrastruktur bermain rendah.

Ia cukup menikmati melihat ke dalam lensa kamera dan kami memiliki banyak fotonya yang mengagumi bayangan dirinya sendiri di dalam lensa!
